

**QUIZ :9**

**Marks:15**

**Name:**

**Rollno:**

---

**1)-CODE:**

**(15 Marks)**

Create a Point class that has the following functionalities similar to the Complex class discussed in the lecture:

A constructor to initialize the x and y coordinates.

Overload the + operator to add two Point objects.

Overload the = operator for assignment.

Overload the += and -= operators as compound assignment operators.

Implement the display() method to print the coordinates.
